**COSCH** stimulates collaborative research, establishes good practice and simplified uses of high-resolution optical techniques. COSCH research is undertaken by 5 working groups (WG) defining recommendations on spectral and spatial recording techniques (data acquisition, processing and analysis) for CH experts:

- WG 1: Spectral object documentation
- WG 2: Spatial object documentation
- WG 3: Algorithms and procedures
- WG 4: Analysis and restoration of cultural heritage surfaces and objects
- WG 5: Visualisation of cultural heritage objects and its dissemination

Modern optical technologies offer many new possibilities for recording cultural heritage objects digitally. To what extent can they meet the requirements of museum exhibition and other dissemination instruments? Six case studies launched end of 2014 address different intentions of visualisations of digital cultural heritage objects:

- Roman coins;
- Germolles' wall paintings;
- Ancient Greek Kantharos;
- White Bastion fortress;
- Romanian cultural heritage;
- Bremer "cog".

During the meeting the most recent outcomes and questions arising from hands-on experience of these case studies will be presented for evaluation.

The topic of the **sixth ECI's Think Tank** is the COSCH vocabulary.

You will be afforded an opportunity to finalise your contribution to the COSCH vocabulary, workshop initiatives for publication in fora such as Wikipedia, and to look at opportunities for publication within the group! Let's plan some articles!.

As a participant you will:

- engage with peers from around Europe,
- make your original contribution to the Action, and
- build your research network.
